

Your guide up the Claude Code mountain.

THE BUSINESS

The Prompt Sherpa teaches startup creators to build real products with Claude Code — Anthropic's agentic coding tool. Founders who can describe what they want but can't (yet) engineer it get a guided path: environment setup, prompting patterns that actually ship features, and hands-on sessions taking an idea from empty repo to deployed app.

WHY IT WINS

From idea to shipped

Hands-on sessions that end with working software, not just notes — you ship during the engagement.

Prompting as a craft

Learn the patterns that make agentic coding reliable: specs, guardrails, iteration loops, and review habits.

Built for non-engineers

Designed for founders and creators — no CS degree assumed, no condescension included.

AT A GLANCE

AUDIENCE

Startup founders & creators

FORMAT

1:1 guided sessions & small cohorts

FOCUS

Claude Code · agentic development
